

AccentHansen have a clear vision for 2009 With the launch of GlazeShield FL™

15 January 2009 – AccentHansen, one of the UK's market-leading steel door manufacturers and installers, is delighted to announce the launch of its new glass fire door GlazeShield FL. Building on the success of their established steel door business and the growth they have seen over the past year, AccentHansen are working hard to ensure their clients have a choice of fire products.

The GlazeShield FL is a fully tested and proven product and a great extension to AccentHansen's established portfolio of steel doors. Offering clients a choice, the glass fire door now enables them to use their trusted supplier, even when a more aesthetically pleasing door is required. The GlazeShield FL comes in a choice of frame finishes including stainless steel, PPC, and bronze and the glass manifestation can be made to suit individual requirements. The doors can even be designed for both manual and automatic operation. Available in 10mm or 12mm the glass and frames are tested to BS 476 Part 22 1987 for up to 60 minutes integrity which means they meet stringent fire regulations for preventing the passage of flames.

Mark Mallen, Managing Director, AccentHansen, said "The addition of GlazeShield FL to our portfolio is great progress, steel doors have their own specific use but being able to offer our clients an alternative when they need it is important to us. The new doors are elegant, high quality and have high performance. Clients already receive outstanding service, now they can get that with a glass fire door too."

Also launching later this year will be an insulated version, GlazeShield IFL™, which will be available with 30 and 60 minute integrity, making AccentHansen the only company able to offer this combination of tested glass fire doors with minimal surrounding framework.
